Most urgent errors on the site

1. Error! This website is not optimized for mobile devices... It is optimized for devices which have at least 950px wide display!
2. Error! The web address is accessible with and without www!
3. Deprecated html elements are found
4. Meta viewport tag is missing
### SEO

#### URL
Domain: www.plantaoesportivo.com/
Character length: 25

#### Title

Plantão Esportivo - A notícia em 1º lugar

The page title, i.e. `<title>` section also appears in the search results. When someone starts a web search, the text of the `<title>` section will appear in the search engines with the most powerful highlight. The `<title>` will clarify the content of the websites for both potential visitors and the search engines. The `<title>` must be placed in the `<title>` section. It is important that each page title is given a specific content matching specific wording up to 70 characters in length! If the `<title>` wording is sufficiently attractive and informative, than search engines can get more visitors.

#### Description

Últimas notícias e informações do esporte de Ariquemes

The `<meta name = "description" content = " "`, i.e. page showing meta tag provides information to Google and to other search engines as to what can be found on that page. The content of the meta description should be descriptive and ~300 (this limit was increased in December 2017) characters in length. The `<meta name = "description" content = " ">` should be placed in the `<head>` section of the websites. If the meta description is written well, you can get more visitors from the hit lists.
**Keywords (meta keywords)**

esporte, futebol, volei, basquete, ariquemes, campeonato, rondonia, ariquemes, alto paraíso, cacaulândia

Error! Using “meta keywords” is meaningless in a while.

The use of `<meta name = "keywords " content = ""> is completely unnecessary since September 2009. Google had published at the time that the meta keywords ranking in the search results does not count. Hence, the use is not recommended. It has no practical use, however, the competitors can get an idea of what phrases the website is optimised for.

**Open Graph Protocol**

Good! The OG (Open Graph) protocol is set on this website.

- **title**: Plantão Esportivo - A notícia em 1º lugar
- **description**: Últimas notícias e informações do esporte de Ariquemes
- **image**: http://www.plantaoesportivo.com/temas/wliane/imagens/pagina/marca_3.png
- **site_name**: http://www.plantaoesportivo.com/

We can identify the relationship between the different elements on our website for the search engines and social networking sites (e.g. Facebook) by using Open Graph. For example, we can tell about an element that it is an image and we can set its URL. It is an excellent choice for telling the social networking sites which images we want to use as a preview image. For example: `<meta property="og:image" content="http://seoryzer.com/seoryzer.png" />

**Dublin Core**

Dublin Core is in use

**Underscores in the URLs**

Good! No underscore (_) found in the URLs.

**Search engine friendly URLs**

Good! The website uses SEO friendly URLs.

</tr>
</tbody>
</table>
The heading marks ("H tag ",s), also known as the "headline tag"-s clarify the side structure and the content of the website. A total of six <h> notations exist, from <h1> to <h6>. <h1> is the most important and <h6> is the least important.

**Note:** only one <h1> should be on the website. The different heading sizes help to clarify the hierarchy of the structure and content of websites for both visitors and search engines. Therefore it is very important to use the correct heading structure!
Google recommends that care should be taken in the case of the 404 pages to retrieve the web server. It should return a true 404 HTTP status code, which prevents Google and other search engines to index the non-existent 404 pages.
Flash content

Good! The website does not have any flash contents.

Although since 2008, Google takes significant steps to interpret the swf files text and javascript content, it is recommended to avoid making / using a flash-based website. **The reason is simple:** javascript redirects on flash content cannot always be understood by Google. Consequently, the indexability of flash websites is difficult. Avoid!

Frame

Good! The website does not use iFrame solutions.

The use of the "iframe" elements on websites should be avoided, since these contents are not considered as parts of the website. Using certain web features is not a problem (for example, Facebook boxes, Google maps), but to embed complete webpages into other web pages in terms of search engine optimisation should be avoided.

Images

We found 100 images on this web page.

Alternate attributes for the following 42 images are missing. Search engines use "alt" tags to understand image content efficiently. **We strongly recommend fixing this issue.**

http://www.plantaoesportivo.com/.. /18578758_759070960928237_2061805609_n_1....

http://www.plantaoesportivo.com/.. /marca.png

http://www.plantaoesportivo.com/temas/wlane/imagens/pagina/seta.gif

http://www.plantaoesportivo.com/imagens/publicidades/logo.gif

http://www.plantaoesportivo.com/imagens/publicidades/rec728.jpg

http://www.plantaoesportivo.com/.. /espaco.png {count} occurrences
The "alt" or "alternative" attribute can describe the content of images for search engines. Today's search engines are not yet able to interpret the information shown in the pictures, so the "alt" text is very important.

Example: `<img src="http://seoryzer.com/seoryzer.png" alt="Free Online SEO Analysis Tool">`
Technologies

- **Mobile optimization**: Error! This website is not optimized for mobile devices... It is optimized for devices which have at least 950px wide display!

  Based on current trends, the use of the Internet will soon be more accessible from mobile platforms (smartphones, tablets) rather than from desktops or laptops. It is advised to be prepared for this today in order to maintain and increase good Google rankings.

  **Important**: in case of mobile searches, Google ranks mobile-friendly sites preferably! Top priority!

- **Deprecated HTML elements**: Good! No deprecated HTML tags are detected.

- **Redirection (www / not www)**: Error! The web address is accessible with and without www!

  Some of the search engines still takes it as internal duplication, if an URL with www and non-www version is also available.

  **Proposal**: should therefore only be used in one version. For example, redirect the www version to the non-www version.

- **Deprecated HTML elements**: Good! No deprecated HTML tags are detected.

- **Printability**: Suggestion! Unfortunately, no printer-friendly CSS found.
Meta Tag (viewport tag, mobile devices)

With the help of the meta viewport, we can determine whether users can zoom into our website or not.

**Example:** `<meta name = "viewport" content = "width = device-width, initial-scale = 1.0, minimum-scale = 1.0, maximum-scale = 3.0"/>

This code defines that the user can zoom in up to three times of the displayed web page relative to the display screen.

**Important:** It is not advised to limit the magnification.
Sebesseg teszteles

- Server response time: The server response time is fast enough.
- Loading time: 4,782 ms
- Table layout: Good! No nested tables found.
- Number of HTTP resources: 146

Alexa's traffic ranks are based on the traffic data provided by users in Alexa's global data panel over a rolling 3 month period. Traffic Ranks are updated daily. A website's ranking is based on a combined measure of unique visitors and pageviews. Unique visitors are determined by the number of unique Alexa users who visit a site on a given day. Pageviews are the total number of Alexa user URL requests for a site. However, multiple requests for the same URL on the same day by the same user are counted as a single pageview. If the Alexa value < strong> 0, it indicates that sites with relatively low measured traffic will not be accurately ranked by Alexa.
We found a total of 124 different links. Internal links: 62 External links: 62
